

# TURBOMACH SA, SWITZERLAND

- **Company located in Riazzino (Switzerland) and founded in 1979. Today an European leading company in energy plant system based on gas turbine technology.**
- **Challenges:**
  - Enabling concurrent engineering thus shortening the detail engineering phase of the project.
  - Achieving better product definition in the desing phase reducing the re-works in the assembly line.
- **SolidWorks Benefits:**
  - 3D modeling enhance significantly the product design control, allowing « virtual » manufacturing and assembling
  - Together with a PDM system Solidworks allow a better product data visibility throughtout the engineering and assembly chain.

**Turbomach's gas turbine plant model RB211**

***“We’ve found a way how to align and coordinate better engineering, design and production processes”***

*G. Minetti & ICT manager*
